RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 96 pages. Original publisher: Washington, DC: Office of the Science Advisor, Risk Assessment Forum, U. S. Environmental Protection Agency, 2008 OCLC Number: (OCoLC)233835521 Subject: Environmental risk assessment -- Mathematical models. Excerpt: . . . 1.

INTRODUCTION Polychlorinated dibenzo-p-dioxins ( PCDDs ), dibenzofurans ( PCDFs ), and biphenyls ( PCBs ) ( Figure 1 ) are persistent bioaccumulative contaminants that are found ubiquitously in environmental matrices, including tissues of fish, birds, and mammals. The most well-studied chemical in this group is 2, 3, 7, 8-tetrachlorodibenzo-p-dioxin ( 2, 3, 7, 8-TCDD ). Demonstrated toxic effects of 2, 3, 7, 8-TCDD in fish, birds, and mammals include adverse effects on reproduction, development, and endocrine functions; wasting syndrome; immunotoxicity; and mortality. Several PCDDs, PCDFs, and PCBs have been shown to cause toxic responses similar to 2, 3, 7, 8-TCDD, in both laboratory and field situations. In this document, the term dioxin-like effects is used to refer to those effects that are similar to those caused by 2, 3, 7, 8-TCDD, and the term dioxin-like chemicals is used to refer to chemicals that exert such effects through binding to the aryl hydrocarbon receptor...
