Pearson Education (US), United States, 2009. Paperback. Book Condition: New. 257 x 211 mm. Language: English . Brand New Book. Don't look now, but your fingerprints are all over the cover of this book. Simply picking it up off the shelf to read the cover has left a trail of evidence that you were here. If you think book covers are bad, computers are worse. Every time you use a computer, you leave elephant-sized tracks all over it. As Dan and Wietse show, even people trying to be sneaky leave evidence all over, sometimes in surprising places. This book is about computer archeology. It's about finding out what might have been based on what is left behind. So pick up a tool and dig in. There's plenty to learn from these masters of computer security. --Gary McGraw, Ph.D., CTO, Cigital, coauthor of *Exploiting Software and Building Secure Software* A wonderful book. Beyond its obvious uses, it also teaches a great deal about operating system internals. --Steve Bellovin, coauthor of *Firewalls and Internet Security, Second Edition*, and Columbia University professor A must-have reference book for anyone doing computer forensics. Dan and Wietse have done an excellent job of taking the guesswork out of a difficult topic. --Brad Powell, chief security architect, Sun Microsystems, Inc. Farmer and Venema provide the essential guide to fossil data. Not only do they clearly describe what you can find during a forensic investigation, they also provide research found nowhere else about how long data remains on disk and in memory. If you ever expect to look at an exploited system, I highly recommend reading this book. --Rik Farrow, Consultant, author of *Internet Security for Home and Office* Farmer and Venema do for digital archaeology what Indiana Jones did for historical archaeology. Forensic Discovery...
